The St. Johns River is an ancient intra-coastal lagoon system. As sea levels dropped, barrier islands became an obstacle that prevented water from flowing to the ocean. Instead, the water collected in the flat valley and slowly meandered northward for about 300 miles forming the St. Johns River.

The River was of significant importance in the life of the first inhabitants. The Timucuan Indians called the river *Welaka* meaning chain lake. They lived along it, fished from it and glided their dugout canoes upon it. In the early 1500’s, the Spaniards named it *Rio de Corrientes* (currents). In 1562, the French arrived at the mouth of the River on May 1st, established Fort Caroline and named the river *Riviere de Mai*. In 1565, the Spanish captured Fort Caroline, massacred the French and named the river *Rio de San Mateo*. In 1578, the Spaniards again re-named the river as *Rio de San Juan* after their local mission. When by the Treaty of Paris in 1763 Florida was ceded to the English, the English translated *Rio de San Juan* to *St. John’s River*. Florida became a U.S. territory in 1821 and, on March 3, 1845, when Florida became the 27th state to join the United States of America, the apostrophe in St. Johns was dropped.
The St. Johns River

In the last half of the 19th century, the phrase “FLORIDA FEVER” was used to describe the winter months. The balmy climate, the wild beauty of the St. Johns River with its shores densely bordered by a forest of lush flowering foliage, abundant hunting and fishing, and inexpensive land costs would bring thousands of tourists and homesteaders to Florida. The River was the water highway for explorers and, with the onset of the steamboat lines, the people headed inland from the River and developed farms and plantations, villages sprang up, and new businesses were created to support the steamboat industry. Steamboats were a faster and cheaper way to transport crops to market, to deliver the mail, and to have supplies delivered. The alternative to steamboats was a difficult trip from the ocean’s shore on foot or by horse through swamps and woods. The STEAMBOAT ERA would greatly contribute to the development of the State of Florida. Due to the spread of the railroad system, construction of highways and the use of motorized vehicles, the successful and romanticized STEAMBOAT ERA in Florida would come to an end in the early 1900’s.

From Whitney’s Florida Pathfinder: 1876 Whitney's maps of the St. Johns River, Florida

St. John’s River.

This grand sheet of water is created by the overflow of the numerous springs and swamps in the southern portion of the State; it flows, unlike any other river in the United States, directly north for over three hundred miles, when turning abruptly to the east, it empties into the Atlantic ocean. Many portions of the river are six miles wide, and north of Lake George no part is less than one mile in width; at Palatka the river becomes narrower. The St. John’s river is credited with carrying a larger volume of water than the Rio Grand, which river is one thousand miles long, and in point of width the St. John’s river is the largest in America.

The many cozy retreats located upon the banks of the St. John’s are of universal attraction, and during the winter season thousands of tourists from every section are here to be found, forgetful of all business cares, enjoying the pleasures of the trip and complimenting the salubrity of the Florida climate.

On the banks of the St. John’s are to be seen many fine orange groves bedecked with the golden fruit; one may also observe the Magnolia, Pride of India, the Pine and other species of trees festooned with long skeins of moss gracefully descending and nearly touching the water’s edge; to witness this sight and to feel and inhale the soft, balmy breezes, scented with the odor of the Magnolia and yellow Jessamine, is a coincidence not presented by any other section of the Unit. d States. There is a charm attached to the incidents of a trip upon this sheet of water—apparently a succession of lakes—that one will not soon forget, especially when contrasted with a winter trip upon the Hudson with its cold, bleak winds.

St. John’s Bluff, near the mouth of the St. John’s river, is the supposed site where the French Huguenots under Laudonniere erected Fort Caroline, which was attacked by Menendez in 1565, when nearly all the inmates were massacred.

Localities on the St. John’s River.

Showing distances from Jacksonville. Sailing south is termed going up the river. Points marked with a star* are on the right going up.

The St. Johns River runs NORTH 310 miles from its headwaters to its mouth. It is the longest river in Florida and one of the few rivers in the United States that flows north. The St. Johns drops in elevation less than 30 feet from its headwaters to its mouth; about one inch per mile. It moves about 1/3 of a mile each hour making it a slow-moving river. Two tides each day go up the River as far as the City of Astor.

**BASINS OF THE ST. JOHNS RIVER**

Upper Basin – from the River’s source in the Indian River to the confluence of the St. Johns and the Econlockhatchee Rivers in Seminole County.

Middle Basin – north through Lakes Jesup, Harney, Monroe, and George.

Lower Basin – heading north from Lake George to the River’s mouth through the jetties at Mayport to the Atlantic Ocean.

**UPPER BASIN**
The Upper Basin is the headwaters or source of the St. Johns River and is a wide 20,000 acre marshy swamp in Indian River County. The marsh is 20 miles west of Vero Beach in the southwest corner of Indian River County. It is difficult to navigate being shallow, narrow, and marshy. The River banks are not well defined and the water is filled with cypress trees, wet prairies, and tree hammocks. Tiny steams come together and begin to flow north.

**BLUE CYPRESS LAKE**

At the Headwaters of the St. Johns River

**INDIAN RIVER LAGOON IN THE UPPER BASIN**

[www.MarineDiscoveryCenter.org](http://www.MarineDiscoveryCenter.org)
The Middle Basin begins at Lake Monroe. The Indian name for Lake Monroe was WEPOLOKSE meaning round lake. The Spanish called the lake VALDEZ. The lake was first referred to as Monroe’s Lake on the 1823 map of Charles Vignoles, which he based on an 1822 survey performed by Captain John Eatton Le Conte (engineer).

Until reaching Lake Harney, the River is a sluggishly-moving stream; it then becomes more of a river and flows to a sand bar at Enterprise at Lake Monroe. Lake Monroe is at the midpoint of the entire river; it is 15 miles square, encompasses 9,406 acres, and is one of the largest lakes on the River. The River deepens at this point and widens as it heads west. The River is fed by rainfall, watersheds, rivers, and the Floridan Aquifer. It was in the Middle Basin that the banks of the River became more defined and were more navigable. Lake Monroe was the last point heading south on the River to which larger steamboats could navigate with relative ease. The larger steamships ran from Jacksonville to the deep east end of Lake Monroe; at this point cargo and people were transferred to smaller boats to make their way through to Rockledge. http://sjrwmd.com/middlestjohnsriver/

In present day, the opposite is true; the River is dredged from its headwaters to Sanford. Large boats do not travel north of Lake Monroe as the channels are unmarked and shallow.

LAKE MONROE

Boaters traveling upriver on the St. Johns River enter Lake Monroe by passing under the bridge of Interstate-4 near Orlando.

The historic springs that the explorer John Bartram visited and the town of Enterprise are on the left in this photograph, the north and east shores of the lake; the more populous Sanford is on the right (west).

LAKE GEORGE

Wikimedia Commons
LOWER BASIN
The River enters the Lower Basin at the northern edge of Lake George. The Lake's width varies from 200 to 1500 feet, covers about 75 square miles, and is the longest lake on the River, and the second largest in the State. The River flows north to Jacksonville where it narrows, turns east and flows to its mouth in the Atlantic Ocean by the jetties at Mayport. Jacksonville is where the era of steamboat travel on the St. Johns River began. http://www.sjrwmd.com/lowerstjohnsriver/

THE JETTIES AT MAYPORT – THE LOWER BASIN

Juan Ponce de León is usually credited with the discovery of Florida, although he may not have been the first Spaniard to reach Florida, as he reported an encounter with a Spanish-speaking Indian on the southwest coast of the peninsula later in his voyage. Ponce de León landed on Florida on April 2, 1513, somewhere on the northwest coast of the present state of Florida, and claimed the land for Spain. He named the new land la Florida, Spanish for flowery.

“The Early History of the St. John’s River” By Ed Winn on Google books.

“The Timuca and Calosa (300,000 native Indians) were doomed to distinction from the Spanish beginning with Ponce de Leon due to spreading of disease, combat, or sold into slavery, etc.”

“Ponce De Leon Never Searched for the Fountain of Youth” By Matthew Shaer, Smithsonian Magazine June 2013 from Smithsonian.com

Menéndez entered the harbor he named San Agustín on August 28, 1565. He later led the massacre of French colonists near the mouth of the St. Johns River at Fort Caroline.
First permanent European settlement in the United States

The Great House/Menéndez Fort was the first permanent European settlement in the United States. Pedro Menéndez de Avilés destroyed the French settlement at Fort Caroline in 1565 and then moved his people to the Saint Augustine area where the Seloy tribe of the Timucuan nation had a settlement. The chief gave the Great House, a huge probably circular or oval thatched structure capable of holding several hundred people, to them. Around this meeting house the Spanish dug a moat and added fortifications of a breastwork and wooden palisade, to protect the munitions and stores.

Menéndez de Avilés, Pedro, 1519-1574--Portraits

Entered harbor which he called San Augustin on August 28, 1565. Afterward captured Fort Caroline, which then became San Mateo and massacred French forces of shipwrecked Jean Ribaut on Anastasia Island.
